

# SDR in ORBIT: LTE-U

Demetrios Lambropoulos, Cat Le, Steven Cheng  
June 11, 2015

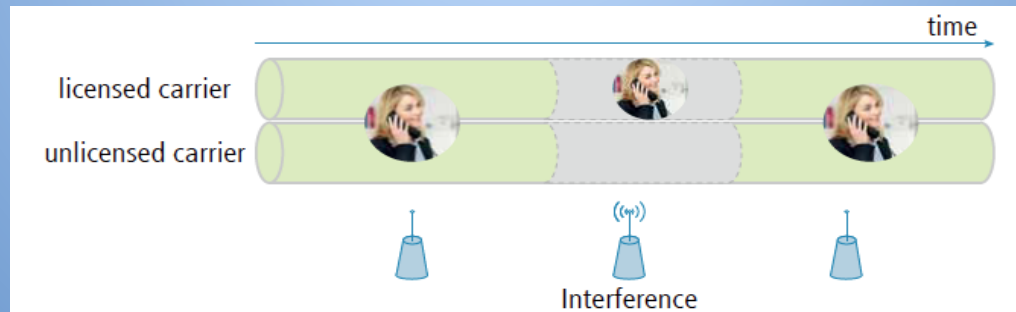

# Spectrum Allocation

- Use of radio frequency bands are regulated
- 3 general types of allocation:
  - Closed spectrum
  - Open spectrum (unlicensed)
  - Licensed

# LTE vs LTE-U (Unlicensed)

- LTE-U: Primary carrier packets are sent through LTE and secondary carrier packets are sent through unlicensed spectrum.
- Increased throughput over LTE
- Utilize listen before transmit technique

# This week

- Practiced WiMAX Tutorials
- Tried Implementing the LTE-U Tutorial
- Read research papers on LTE and LTE-U

# Next Week

- Continue testing the LTE-U tutorial
- Further reading on LTE and unlicensed spectrum properties
